We are pleased to share another wonderful rehab success story from:

Advanced Specialty Hospitals of Toledo
1015 Garden Lake Parkway, Toledo Ohio 43614
(419) 381-0037

Denise presented to the emergency department on August 17th, 2022, and was found to be in respiratory distress with abnormal labs. She spent 23 days in the acute care hospital, working with the medical team to stabilize and treat her symptoms. She required the use of a mechanical ventilator for breathing support and a feeding tube for nutrition.

When Denise came to us at Advanced Specialty Hospital, she needed assistance with all movement and medical management. The respiratory team helped Denise to breathe without the ventilator. Our physical, occupational, and speech therapists worked closely with Denise to improve her strength and stability to be able to walk, dress, eat and communicate with increased independence.

After one month in our care, Denise moved on to an inpatient rehabilitation unit to complete her rehabilitation. We wish her and her family the best as they continue to recover!
