We are pleased to share another wonderful rehab success story from:

Advanced Specialty Hospitals of Toledo
1015 Garden Lake Parkway, Toledo Ohio 43614
(419) 381-0037

John originally went to the hospital with difficulty breathing, low blood sugar, and low heart rate. During his 4 week acute hospitalization, he battled infections and other complications. His breathing declined and he ultimately required the use of a ventilator. When John was stabilized, he was transferred to Advanced Specialty Hospital for ventilator weaning and increasing overall strength.

John arrived to us in December of 2022 following a lengthy hospitalization. He was sedated and dependent on our caregivers for all of his needs. With the help of our clinical team of doctors and nursing staff; John's condition stabilized and improved. He worked with our therapy team to regain his strength to ambulate with a walker, dress himself, and consume an oral diet safely. Our respiratory therapists worked with John to improve his lung capacity to wean from the ventilator and breathe on his own.

John was transferred to a rehabilitation facility to complete his physical recovery before he returned home. We wish John the best and we hope that he can get home to his cats very soon! Thank you for letting Advanced Specialty Hospital to be a part of your recovery!
